

1SXT X-TICK

GAITERS, PROTECTION AGAINST INSECTS (TICK BITES)

Description

The robust X-Tick gaiters are composed of a robust tear resistant fabric containing Cellsolution® Protection fibers. The unique properties of these gaiters provide an effective and a durable protection against insects such as ticks that may carry the bacteria known to provoke Lyme disease. Through its unique procedure of manufacturing and thus unique properties of the Cellsolution® Protection fibres, the tick killing properties of the permethrin inherent fibre lasts much longer but with low permethrin levels than traditional and superficially treated fabrics with permethrin. Additionally, being a textile with a OEKO-TEX® Standard 100 class 1 certificate which approves the handling by toddlers, skin irritation is minimized to a bare minimum or even totally excluded when handling the gaiters.

Product details

Brand

- SIP Protection

Fabric

- 47% cotton - 42% polyester - 11% cellulose (300g/m2)

Inside

- Anti-skid elasticated gaiter with metal lace hook to fix on shoe laces

- Non-slip elastic, adjustable with cord stopper

Outside

- Metal cable and buckle closure for firm fastening to shoes

- Zip closure under flap with touch & close fastening

Certification

- EN ISO 13688

Colours

red

Sizes

UNI
